The SAFE unit (Sub Acute care for the Frail Elderly) is a 20 bed unit at the Perley Rideau Veterans’ Health Centre (a LTC home) that is designed to provide transitional medical care for the frail elderly.

The average LOS is 2 weeks, with a maximum of 4 weeks. All admitted patients are expected to be discharged home. The patients are triaged from the local hospitals and transferred to the unit for ongoing treatment in addition to physical activity to prevent deconditioning.

The physician will be rounding daily on a weekly rotation (flexibility is possible) and is supported with an interdisciplinary team composed of OT, PT, pharmacy, RD and an internist.

Remuneration is through OHIP hospital billings and an on-call stipend (3000. per week). The physician must have family medicine training, and hospitalist experience.
