Looking for 3-4 days of coverage per week

Our family medicine practice is well-established in central Ottawa (Glebe). Most of our patients are young families, and there is a strong emphasis on Women’s Health and Pediatrics. Lots of opportunities for procedures, including IUD insertions, endometrial biopsies, skin biopsies, etc. Our fabulous nursing staff has known our patients for years and are invaluable for helping our clinic run smoothly and efficiently.

I also provide postpartum and newborn care at the Monarch Centre, a specialized outpatient clinic that supports new parents during the first few weeks of their baby’s life. Our team at Monarch is nothing short of awesome and provides exceptional care to new families. For more information about our clinic, visit the website at www.monarchcentre.ca.

There is no requirement for weekend coverage, but if interested, a locum could pick up shifts at the Hampton Carling After-Hours Clinic, or at the Monarch Centre.

With a baby on the way my start date is pretty firm (give/take a week or two), but the duration of the locum is definitely flexible. I’d love to take at least 6 months, and preferably closer to 9 or 10, but this is negotiable.
